PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer and Technical Project Lead with 10+ years of experience building custom business applications, workflow automation systems, customer platforms, and internal management software. Experienced in translating real-world business processes into software solutions, from frontend and backend development to API integration, database design, deployment, and server setup. Strong hands-on background with React, JavaScript/TypeScript, Python, Django, Flask, Laravel, PostgreSQL, MongoDB, MySQL, Docker, and Nginx.

CORE SKILLS

Frontend: React.js, JavaScript, TypeScript

Backend: Python, Django, Flask, Node.js, Laravel, REST APIs

Databases: PostgreSQL, MongoDB, MySQL

Infrastructure: Docker, Nginx, Linux, Server Deployment

Engineering: System Analysis, Business Workflow Design, Authentication, Roles & Permissions, API Integration, Technical Project Coordination

PROFESSIONAL EXPERIENCE

Rangin Kaman — Full-Stack Developer | Technical Project Lead | IT

2023 – Present

- Developed the main frontend of an internal manufacturing and operations management system with React.
- Collaborated with a three-person backend team on a Django-based backend and participated in business-process analysis with management.
- Designed a large part of the application's workflows and user-facing structure.
- Worked with PostgreSQL as the primary database, with Node.js and MongoDB used in selected parts of the system.
- Implemented authentication, roles, and permissions.
- Integrated the system with Holo accounting software and its API, a fingerprint attendance system, and an SMS panel.
- Supported project coordination and parts of the company's IT and infrastructure operations.
- The system is used by approximately 50 users across production, warehouse, sales, and operational workflows.

Saman Bank Brokerage — Software Developer

2019 – 2022

- Developed the customer loyalty platform frontend independently with React based on designs provided by a graphic designer.
- Collaborated with another developer on a Flask-based backend and API layer.
- Worked with PostgreSQL and handled project deployment.
- Implemented customer-facing features including loyalty points, rewards, educational content, and related workflows.
- The platform served approximately 200 users.
- Also worked on automation and registration-related integrations around the Sejam ecosystem.

Pishro Ertebatat Novin (PAN) — Software Developer | Project Coordination

2015 – 2018

- Developed most of a sales and order-management system related to Irancell services.
- Built workflows for telephone sales, order registration, administrative processing, and inventory-related operations.
- Developed a web sales application with direct recharge and internet package purchase capabilities.

- Worked with Laravel, JavaScript, and MySQL.
- Handled deployment and server-side setup.
- The system served approximately 100 users.

EARLIER EXPERIENCE

Additional experience includes web and REST API development, React/React Native applications, Node.js, Laravel, and business web applications. Earlier CV records also include work with Aria Hotel Group, Andishe Pardaz Amir Kabir, FlavorTome (Germany), and Sofar. These older roles are being kept separate from the three primary case studies until their dates and responsibilities are re-verified.

SELECTED PERSONAL PROJECTS

Algorithmic Trading / Financial Software — explored and developed two personal trading-bot projects. These projects were not completed as production products, so they are positioned as personal projects and areas of interest rather than professional client work.

EDUCATION & CERTIFICATIONS

Microsoft MCPS / MCSA — 2011–2014

Associate Degree, Industrial Electricity — 2005–2008

LANGUAGES

English: B1 (actively improving for international client communication)

Persian: Native

PROFESSIONAL FOCUS

Custom Business Applications • Internal Management Systems • Workflow Automation • API & System Integration • SaaS / Product Development • Financial Software
